The 1968 INVENTORY OF MUNICIPAL WASTE FACILITIES is published in ten volumes — one for each region as shown below:

Region I — EPA Publication No. OWP-1 — Volume 1
Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont

Region II — EPA Publication No. OWP-1 — Volume 2
New Jersey, New York, Puerto Rico, Virgin Islands

Region III — EPA Publication No. OWP-1 — Volume 3
Delaware, Maryland, Pennsylvania, Virginia, West Virginia, Washington, D. C.

Region IV — EPA Publication No. OWP-1 — Volume 4
Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee

Region V — EPA Publication No. OWP-1 — Volume 5
Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin

Region VI — EPA Publication No. OWP-1 — Volume 6
Arkansas, Louisiana, New Mexico, Oklahoma, Texas

Region VII — EPA Publication No. OWP-1 — Volume 7
Iowa, Kansas, Missouri, Nebraska

Region VIII — EPA Publication No. OWP-1 — Volume 8
Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming

Region IX — EPA Publication No. OWP-1 — Volume 9
Arizona, California, Hawaii, Nevada, American Samoa, Guam, Trust Territories of Pacific Islands, Wake Island

Region X — EPA Publication No. OWP-1 — Volume 10
Alaska, Idaho, Oregon, Washington

Environmental Protection Agency Publication No. OWP-1

Volume 8

INTRODUCTION

The municipal waste facilities described in this publication are those reported by the States and Territories of the United States as being in place on January 1, 1968. The data presented were collected by the various State and Territorial water pollution control agencies and processed through the Regional and Headquarters offices of [at that time] the Federal Water Pollution Control Administration.* The inventory is the fifth to be taken on a national basis. The previous four, in 1940 (1), 1945 (2), 1957 (3) and 1962 (4), were conducted and published by the U.S. Public Health Service.

A "facility", as referred to in this publication, is defined as a treatment plant, or, where wastewater is discharged raw, the collection system, for disposal of domestic and industrial wastewaters. The facilities reported here are those associated with municipal type operations and do not include those at: (1) institutions such as schools, hospitals, or parks; (2) private installations such as trailer courts, shopping centers, or motels; (3) separate industrial waste disposals; or (4) Federal installations.

Facilities are listed alphabetically within States by community or, where a sanitary district, public utility district, etc., is concerned, by the name of that entity. States are grouped within the ten volumes of this publication according to the Environmental Protection Agency Region in which they are located.

Each community listed has some type of sewer for collection and disposal of domestic and industrial wastewaters. The wastewaters may be discharged raw or they may be treated either by a plant within the community or by one in a neighboring community or district. (See the "Key to Entries in Individual Listings" on Page vii, and the accompanying "Notes Regarding Entries" for conventions and codes used to show the basic characteristics of the facilities and other detailed data including needs for improved treatment.) Following the listing of individual facilities there is for each State a summary of plants serving communities other than their own with the names of the "served" communities.

Data in this and the other nine volumes of this publication have been analyzed on a national basis and results published in Federal Water Quality Administration Publication No. CWT-6,1970, "Statistical Summary — 1968 Inventory of Municipal Waste Facilities in the United States".

---

*This publication was originally planned as FWQA Publication No. CWT-7 with nine volumes corresponding to the former FWPCA Regions. For convenience of future reference, it has been restructured into ten volumes corresponding to the existing ten Regions of the Environmental Protection Agency and assigned an EPA publication number.

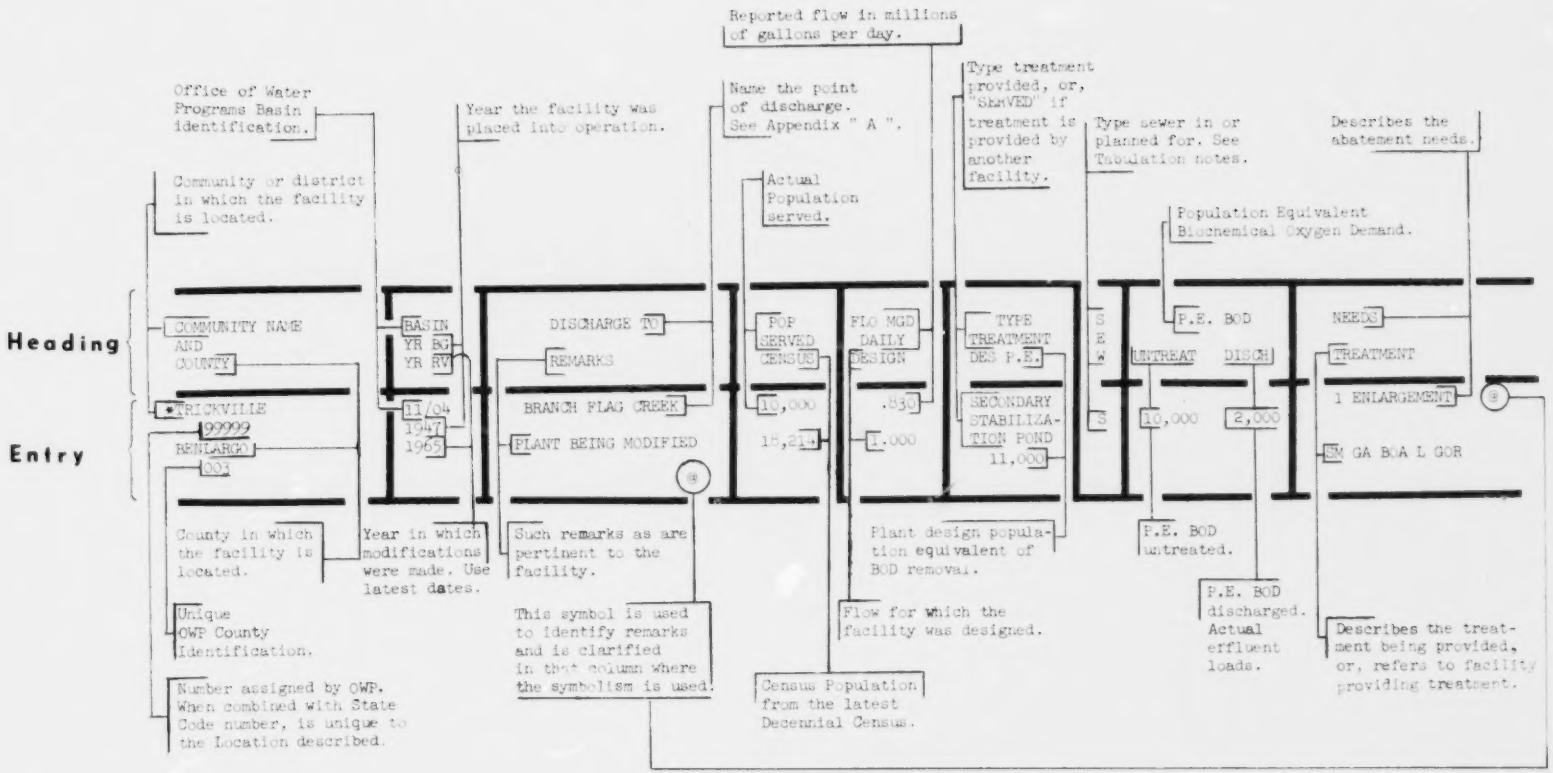
ACKNOWLEDGEMENT

This publication includes data collected by the various State water pollution control agencies and processed through the regions and headquarters of the Environmental Protection Agency, Office of Water Programs. Appreciation is expressed to personnel of the State agencies for their data collection efforts and to the staffs of the Regional Offices for their review, evaluation, assembly and submission of the data.



Reported flow in millions of gallons per day.
Office of Water Programs Basin identification.
Year the facility was placed into operation.
Name the point of discharge. See Appendix " A ".
Type treatment provided, or, "SERVED" if treatment is provided by another facility.
Type sewer in or planned for. See Tabulation notes.
Describes the abatement needs.
Community or district in which the facility is located.
Actual Population served.
Population Equivalent Biochemical Oxygen Demand.

NOTES REGARDING TABULATIONS

Definitions, Conventions and Codes Used in the Inventory Records

General

The location, type, capacity, point of discharge, degree of treatment (where provided) and additional abatement needs (if any) are shown in the listing for each facility reported in the inventory. Records are arranged alphabetically by the name of the community, sanitary district, or other political or administrative area in which the facility is located.

Definitions of the data elements included in the record of each facility and the conventions and codes used are explained below and illustrated in the chart on the preceding page. Where data were not reported, an "X" will appear in the appropriate place in the record. A hyphen (-) is used to show that a data element does not apply to the facility reported.

Data Elements

COMMUNITY NAME

This is the name of the community in which the facility is located, or, in the case of an independent facility such as a sewer sanitary district, commission or authority, the name of that entity. The five-digit number directly below the name of the community is one which has been assigned by the Office of Water Programs (OWP).

COUNTY

This is the county in which the facility is located. The three-digit number directly below the name of the county is the unique number for that county as prescribed in the U.S. Bureau of Standards publication, Federal Information Processing Standards No. 6-1, "Counties and County Equivalents of the States of the United States."

BASIN

The hydrological location of the facility is shown as a pair of two-digit numbers separated by a slash (/). The first two digits define the Major River Basin, the last two show the Minor River Basin as defined and coded by OWP. (See Appendix A, Page 3, for code key.)

YEAR BEGAN (YR BG)

This is the year that the facility was initially placed in operation.

YEAR REVISED (YR RV)

This is the year that the latest modification, if any, was made to the facility.

DISCHARGE TO

This entry shows the name of the water course or land area to which the untreated waste or treatment plant effluent is discharged. The following abbreviations are used:

Ar. --Arroyo	N. --North
Br. --Branch, Brook	Pd. --Pond
Ca. --Canal	R. --River
E. --East	S. --South
Fk. --Fork	Str. --Stream
L. --Lake	Trib. --Tributary
Ld. --Land	W. --West
Lt. --Little	Wa. --Wash

REMARKS

This portion of the form is used to enter remarks pertinent to any data element reported. As shown in the illustration of an entry on page 00, the remark "plant being modified" is annotated by the symbol "@." The symbol also appears under the column (last) headed NEEDS to show that the remark pertains to this particular data entry.

POPULATION SERVED (POP SERVED)

This column entry is the estimated total number of people served by the facility, including those in any adjacent community(ies) the facility may serve.

CENSUS

The population figures are those of the community in which the facility is located and are obtained from the 1960 Decennial Census or from the 1961 edition of the Rand McNally Atlas giving 1960 figures. Places which were created since 1960 have been assigned a population determined by a local census or agreement. Since the population is not normally definable for districts, commissions, or authorities, a dash (—) is entered here for these categories.

AVERAGE DAILY FLOW (FLO MGD)

The waste flow to the facility is entered, in MGD, to three decimals, e.g., 1.250. This is the daily average over the period of a year so as to consider seasonal fluctuations. This figure, when it is related to the bottom entry of the column, will measure the relative amount of design capacity used.

DESIGNED FOR (DESIGN)

The average daily flow for which the facility was designed, in MGD, is entered to three decimals, e.g., 2.125. This figure, when related to the top entry of the column, will show whether or not the plant is adequate or overloaded.

TREATMENT (TYPE TREATMENT)

The principal treatment devices and methods are indicated by alphabetic symbols. The first letter of the group signifies the major treatment method, process, or equipment; subsequent letters in the group describe details. The symbols are arranged in the order in which the treatment processes occur.

Combination units performing more than one function in a single structure are enclosed in parentheses. Enclosures in slashes (//) indicate parallel or alternate operations. Chlorination, where used, is generally noted only once in each plant, regardless of whether application is made at more than one point. (See Appendix B, Page 6, for code key.)

DESIGNED POPULATION EQUIVALENT (DES P.E.)

This entry shows the capacity for removal of biodegradable organic materials for which the facility was designed in terms of the population equivalent (P.E.) of the biochemical oxygen demand (BOD — 5 day 20°C). The P.E. is computed on the basis of 0.17 lbs. per day per capita of BOD.

TYPE OF SEWER

The type of sewer system is coded as follows:
S--Separate (designed to carry domestic sewage and associated industrial wastes separately from stormwater runoff).
C--Combined (designed to carry domestic sewage, associated industrial wastes, and storm water runoff in the same sewers).
B--The community has both separate and combined sewers.

POPULATION EQUIVALENT (P.E. BOD)

The left entry is the Population Equivalent of the untreated waste as it reaches the treatment plant. Only measured values are used, not estimates. This figure, when related to the Design P.E., will compare the actual biological loading with the biological design loading.

The right entry is the Population Equivalent of the treated waste as it is discharged to the receiving area. In the case of untreated wastes, the side-by-side entries will be the same. Only measured values are used, not estimates. This figure, when related to the untreated entry

should measure the relative efficiency of the treatment plant in reducing BOD.

POLLUTION ABATEMENT NEEDS

Symbol, Title and Explanation. (Only one symbol should be used, but see "3.")

0--New Treatment Facilities This symbol indicates the need for a new plant when "None" appears in the "Treatment" column. Compare the use of this symbol with the use of symbol "4" below.

1--Enlargement of Existing Facilities This symbol indicates a need for enlargement of the existing treatment plant shown; for example, addition of another filter to a trickling filter plant. When this symbol is used, it indicates that the degree of treatment in use is considered to be adequate, but that additional capacity is required.

2--Addition of Other Treatment Methods to Existing Facilities This symbol indicates a need for addition of other treatment methods to the treatment plant shown; for example, the addition of trickling filters to a primary treatment plant. When this symbol is used, the degree of treatment is not considered to be adequate without modification, and the plant should be "upgraded."

3--Chlorination This is a specific requirement coming under symbol "2" above. It may be used either in conjunction with that symbol (as when chlorination plus other additions are needed), or in place of it (as when chlorination only is needed).

4--Replacement of Existing Plant This symbol indicates a need for replacement of the existing treatment. "Replacement" means that the plant replaced will no longer be used. It is possible that this replacement may be by a plant providing the same degree of treatment as that which is replaced. The symbol provides for recognition of the fact that pollution reduction has been provided for in the past, but that due to obsolescence, or for any other reason, the existing facilities are no longer capable of producing satisfactory results, are too expensive to operate, or for other reasons are being replaced.

5--Improved Operation or Utilization of Existing Facilities

6--Connection to Adequate Existing Sewer System

7--No Project Needed

Appendix A

MAJOR MINOR BASIN CODES

The Major Minor Basin codes designate river basins by means of four digits divided into two two-digit groups separated by a slash in the inventory record. The first two digits (the number pair to the left of the slash and of the heading for each basin area) designate the Major River Basin. The second two digits (to the right of the slash in the inventory — indented to the right in the following listing of codes) designate the Minor River Basin located within the Major River Basin. Thus, the four-digit group 01/05, in the inventory record, defines the Northeast Major River Basin and the Thames River Minor River Basin.

01 NE — Northeast
- 01 Quinnipiac River & Western Connecticut Coastal
- 02 Housatonic River
- 03 Pawcatuck River & Eastern Connecticut Coastal
- 04 Connecticut River
- 05 Thames River
- 06 Narragansett Bay
- 07
- 08 Massachusetts Coastal
- 09 Merrimack River
- 10 Piscataqua River & New Hampshire Coastal
- 11
- 12 Saco River and South Maine Coastal
- 13
- 14 Presumpscot River and Casco Bay
- 15 Androscoggin River
- 16 Kennebec and Sheepscot Rivers
- 17 Penobscot River
- 18 North Maine Coastal
- 19 St. Croix River

19 VI — Virgin Islands

Appendix B

KEY TO SYMBOLS — WASTE TREATMENT PROCESS

- **A** _____ Aeration
  - AA _____ activated sludge, diffused air aeration
  - AC _____ contact aerators
  - AE _____ extended aeration (in conjunction with AA or AM)
  - AM _____ activated sludge, mechanical aeration
  - AP _____ aeration, plain, without sludge return

B _____ Sludge beds
BO _____ open
BC _____ glass covered
C _____ Settling Tanks
CI _____ two story (Imhoff)
CM _____ mechanically equipped
CP _____ plain, hopper bottom or intermittently drained for cleaning
CS _____ septic tank
CT _____ multiple tray, mechanically equipped
D _____ Digester, separate sludge
DA _____ digester, aerobic
DC _____ with cover (fixed if not otherwise specified)
D (CG) _____ gasometer in fixed cover
DE _____ gas used in engines (heat usually recovered)
DF _____ with floating cover
DG _____ with gasometer cover
DH _____ gas used in heating
DM _____ stirring mechanism
DO _____ open top
DP _____ unheated
DR _____ heated
DS _____ gas storage in separate holder
DT _____ stage digestion
E _____ Chlorination
EC _____ with contact tank
EG _____ by chlorine gas
EH _____ by hypochlorite
F _____ Filters
FC _____ contact beds
FM _____ magnetite (straining)
FO _____ roughing filters
FR _____ rapid sand or other sand straining
FS _____ intermittent sand
FT _____ trickling (no further details)
FTH _____ high capacity
FTN _____ fixed nozzle, standard capacity
FTR _____ rotary distributor, standard capacity
FTT _____ traveling distributor, standard capacity
G _____ Grit chambers
GA _____ aerated grit chambers
GH _____ without continuous removal mechanism
GM _____ with continuous removal mechanism
GP _____ grit pocket or screen chamber
GW _____ separate grit washing device
H _____ Sludge storage tanks (not second stage digestion units)
HC _____ covered
HM _____ with stirring or concentrating mechanism
HO _____ open
I _____ Sewage application to land
IC _____ with cropping
IP _____ percolation beds
IS _____ sub-surface application
IU _____ land underdrained
K _____ Chemical treatment — Flocculation. Chemical treatment-type units or equipment not necessarily complete or operated as chemical treatment
KA _____ flocculation tank, air agitation
KC _____ chemicals used
KM _____ flocculation tank, mechanical agitation
KX _____ no chemicals used
L _____ Lagoons
LE _____ evaporation lagoons
LO _____ oxidation lagoons or ponds
LP _____ lagoon for settling of sewage
LS _____ sludge lagoons — not for treatment of sewage
O _____ Grease removal or skimming tanks — not incidental to settling tanks
OA _____ aerated tank (diffused air)
OM _____ mechanically equipped tank
S _____ Screens
SC _____ comminutor (screenings ground in sewage stream)
SF _____ fine screen (less than ⅛" openings)
SG _____ screenings ground in separate grinder and returned to sewage flow
SH _____ bar rack (½" to 2" openings) hand cleaned
SI _____ intermediate screens (⅛" to ½" openings)
SM _____ bar rack (½" to 2" openings) mechanically cleaned
SR _____ coarse rack (openings over 2")
ST _____ garbage ground at plant and added to sewage flow
T _____ Sludge thickener

TC _____ covered
TM _____ stirring mechanism
TO _____ open top

V _____ Mechanical sludge dewatering
VC _____ sludge centrifuge
VV _____ rotary vacuum filter
VO _____ other

X _____ Sludge disposal
XB _____ barged to sea
XD _____ used for fertilizer
XF _____ burned for fuel
XN _____ incinerated
XP _____ used for fill

Z _____ Sludge conditioning
ZA _____ chemicals used, alum
ZC _____ chemicals used (unidentified)
ZI _____ chemicals used, iron salt
ZL _____ chemicals used, lime
ZX _____ no chemicals used
ZY _____ elutriation
